

## Turning a Confetti Light

### Supplies Needed

- 1 1/2" Forstner Drill Bit
- Blank
- Faceplate
- Revolving Center
- Glue (Thick CA or Epoxy)
- Sandpaper/Finish
- Drill or Drill Press
- 4" x 4" Waste Block
- Eye and Ear Protection

### Steps

1. Select your blank and drill a 1 1/2" diameter hole to the desired depth. Measure the confetti light for reference.
2. Mount a 4" x 4" waste block on a faceplate and turn a 1 1/2" diameter drive tenon 2" long. The blank should fit snugly over the drive tenon.
3. Mount the drilled blank onto the drive tenon and advance the tailstock with revolving center up against the bottom of the blank to provide pressure.
4. Turn to the desired shape, then sand and finish the blank.
5. The glass lamp can be glued in place using a silicone caulk to allow for wood movement.
